

## CARRIER MAXIMUM NEGATIVE-OFFSET SETTINGS: For use with viaDNA Remotes only.

Beginners start at 6V-7V and may increase over time as needed. The higher range is 8V-10V. Max = 10V.

Refer to the “Amplitude-Power Graph” and the “Herxheimer when Rifing” documents to determine if/when to increase/decrease Amplitudes. No Wobble. Carrier frequency is 2977792.

Use spooky2 software version 20190903.

The screenshot displays the Spooky2 software interface with several key settings highlighted:

- Signal Settings:** Out 1 and Out 2 Amplitude is set to 7 V, and Offset is set to -100%.
- Output Shadowing:** Out 1 is fixed at 2977792 Hz, and Out 2 is set to Abs (Out1 - F1) Hz.
- Wobble:** Amplitude Wobble, Frequency Wobble, and Harmonic Wobble are all set to Disabled.
- Waveform Setup:** The first two channels are set to a square wave with a length ratio of 1 and a percentage of 0.

The interface also shows a schedule section (Run From 08:00 pm to 08:00 pm) and contact mode options (Ramp Up, Ramp Down, Reduce Amplitude < 10 kHz).
