FOLLOW STEPS TO DOWNLOAD & INSTALL THE VIADNA PRESETS FILE

Watch this BEFORE you click on below Install File

BEFORE YOU DO ANYTHING: Go to the computer/laptop that you use to run rife frequency programs, where the spooky2 software is located. Make sure your **Wi-Fi** is turned on. Continue with Steps 1 through 11.

(If you're not in front of the computer where your rife frequencies are running, see *Alternate instructions below.)

1. Click on **viaDNAremote.com/about-viadna/**
2. Under Software & Settings, click on "**viaDNA Presets – Installation File**".
3. Then click on **"Install viaDNA Presets 103122"**
4. A window will open. Before you hit Save, click on the word "**Downloads**" on the left side of the window. Now hit "**Save**". Close the viaDNA website.
5. Now go to your "Downloads" folder by clicking on the 🔍 Search (looks like an hourglass). Type into the search area the word "downloads", then hit "**Enter**".
6. You should see the Install Zip File you just saved. Now double-click on **Install_viaDNA_Presets_102722**
7. You should see 2 portions. Double-click on the "bat" file called **Install ViaDNA Presets.BAT**.
8. Click on "**Extract all**". Then hit the button at the bottom right called "**Extract**".
9. Now double-click on the same bat file. (You **may** see a window open-up titled "Windows protected your PC". **Do not** click on "Don't run". Instead click on "**More info**". Then select "**Run anyway**").
10. You can now close the Downloads window since the files have been copied to spooky2 User directory.
11. Now open your Spooky2 software. In the **Presets** tab, click on "**User directory**" (square with a person's head). You will see the list of folders in the left column.
12. On subsequent updates, the viaDNA presets folder and documents folder will be deleted, and replaced by the newly created updated files.

*Alternate Instructions: If you are not in front of the computer where your spooky2 software is running, insert a **thumb drive** into the USB port of a computer with Wi-Fi. Follow steps 1 – 3. Step 4 : When the window opens, look on the left side and select "**This PC**" and click on the **drive letter that contains your thumb drive**. Then hit **Save**. Close the viaDNA website. Take the thumb drive over to your rife laptop and insert it into USB port. Double-click on "**This PC**". Double-click the **drive letter that contains your thumb drive**. **Right-click** on the file called **Install_viaDNA_Presets_103122.zip** Select "**Copy**". On the left side left-click on "**Downloads**". Right-click in the open area, and select "**Paste**". Then continue with steps 6 and beyond.
